# ELECTRONIC CATALOGING

As the world discovers the benefits of technology, areas of specialisation are developing a momentum of their own. E-cataloging for example, has become a discipline with its own masters.

HOPE's involvement with electronic parts cataloging started with our clients needing more than just superior software to operate efficiently. In fact, electronic parts cataloging was critical to their success.

HOPE is committed to growing and strengthening the electronic parts catalog, while developing software and communication tools to help our customers be most successful. At HOPE, the goal is to keep an open mind and an open-systems approach, with our customers in focus.

Whether you are a product catalog publisher, portal operator, large manufacturer, spare parts supply chain manager or manager of capital equipment maintenance, HOPE has the tools you need to compete effectively in the world of e-commerce.

Web-enabled electronic catalog for architectural parts with search and navigation tool.
